

MicroPrime B

Universal Desensitizing Agent

ELIMINATE POST-OP SENSITIVITY!

WITHOUT SOFT TISSUE IRRITATION

MicroPrime is a superior desensitizing agent which can be placed under dental cements or temporary, provisional or final restorative materials to reduce post-operative sensitivity.

It can also be used for desensitization of amalgam restorations, either conventional or bonded.

MicroPrime contains HEMA to aid bonding primers to penetrate etched dentin. The HEMA base in MicroPrime helps seal tubules, giving immediate relief from pain due to hypersensitivity. Most dentin resin bonding materials will benefit from MicroPrime application. Its application reliably reduces post-op sensitivity by supporting the collagen framework for easier penetration of the adhesive, thus enhancing the dentin bond.

ADVANTAGES

- Quick & Easy Application
- Universal Compatibility
- Antimicrobial Agent

APPLICATION IS QUICK AND EASY

MICROPRIME IS IDEAL FOR:

- Abrasion, cervical erosions and preps
- Applications to vital crown preparations prior to luting with cements
- At the “prep” appointment to desensitize during temporization
