

INSTRUCTIONS

CHAIRSIDE® Block Out Material is a heatless liquid dam that has been uniquely formulated to eliminate the heat transfer problem associated with paint on dam materials. CHAIRSIDE Block Out Material resists penetration from air abrasion particles.

DIRECTIONS FOR USE

1. Place a 20 gauge needle tip securely on the CHAIRSIDE Block Out Material lure lock syringe.
2. Apply a coat of CHAIRSIDE Block Out Material 1-2mm thick on the gingiva and on tooth surfaces to be protected prior to power bleaching, air abrasion, sandblasting or other procedures requiring intraoral protection, or place in areas to be blocked out prior to taking impressions. CHAIRSIDE Block Out Material does not run so it can be placed over multiple teeth before curing.
3. Light cure for 10 seconds, depending on the light you are using.

STORAGE

The shelf life of CHAIRSIDE Block Out Material is 3 years when stored at 77°F (25°C) or below.
