TIPS FOR SUBMITTING A SUCCESSFUL CASE

- 7. Please make sure that your patient has a well fitting denture
 - ★ If a reline is needed, chairside reline is acceptable
 - ✗ Refrain from soft relines
 - ✗ Impression material is acceptable

✗ Be sure to trim away any excess

Note: A loose denture will result in a loose guide

- \mathcal{Q} . Place your radiographic markers, evenly spaced across the buccal surface
 - ★ Typically in the 3, 6, 11, & 14 general regions
 - ★ You will also need to place 2 radiographic markers in the palatal surface (Not the intaglio surface of the denture)

Note: We recommend that you use either VF-20 or CT spot radiographic markers

- Place the denture in your hand and digitize the denture completely, (capturing the intaglio surface)
 - \star Please make sure that the radiographic markers are visible in the scan
 - ★ Continue scanning opposing, then place the denture back into the mouth
 - ★ Scan the bite
- Perform a CBCT scan of the patient (out of occlusion) while biting on cotton rolls, to ensure the denture stays fully seated
 - ★ Please be sure that the radiographic markers stay in place, as movement may result in restarting the process
- 5. Once you have completed these steps, you can upload your case through the ZEST portal on our website NavaGation.net.
 - ★ Remember to upload the patient smile and profile photos
