INTRODUCING A NEW IMPLANT DESIGNED EXCLUSIVELY FOR OVERDENTURES.
THE LOCATOR OVERDENTURE IMPLANT.

GIVE YOUR PATIENTS THE FREEDOM TO EAT, SPEAK AND LAUGH AGAIN.
Since the McGill Consensus in 2002, the dental industry has recognized that implant-supported overdentures are the minimum standard of care* for edentulous patients. The percentage of the U.S. population over the age of 65 has more than tripled to 12.9%.† This number will continue to increase as the baby boomer population ages with approximately 26% of them becoming edentulous, likely requiring dentures.† With these booming statistics, it is not surprising that mini implant overdentures are forecasted to grow more than 150% by the year 2017.†

As these patients look for treatment options, mini implants are an ideal solution. However, for years mini implants have suffered a bad reputation due to historically weak materials, poor designs and product misuse. In order to provide patients with the quality of care that they desire, an increasing number of clinicians are now recognizing the unique benefits of using the next generation of narrow diameter implants for retaining overdentures.

IN 2010, 42,094 MINI IMPLANT OVERDENTURES WERE PLACED. 2017 ESTIMATED 108,956 A GROWTH OF 159%

† iData Research, 2011
PATIENTS DEMANDED, YOU ASKED, ZEST DELIVERS

THE LOCATOR® OVERDENTURE IMPLANT SYSTEM

Until now, choosing a narrow diameter implant often meant a sacrifice in attachment performance and ultimately patient satisfaction. Introducing the LOCATOR Overdenture Implant System (LODI) featuring the world’s leading overdenture attachment from Zest Dental Solutions.

LODI is ideal for fully or partially edentulous patients with severe resorption and very narrow ridges. The typical treatment plan for these edentulous patients would be bone grafting, requiring a long process with additional surgeries and added expense. For these reasons, patients often decline dental implant treatment. Now you can offer these patients a viable treatment option.

Featuring narrow diameter implants with the best-in-class LOCATOR Attachment, the LOCATOR Overdenture Implant System is a less invasive, predictable and durable implant-retained overdenture option for patients. In essence, Zest has answered clinician requests and patient demands for an effective, predictable and cost conscious technique for securing dentures.

THE LOCATOR OVERDENTURE IMPLANT SYSTEM

- A treatment alternative for patients who decline bone grafting or have limited finances
- A solution to attachment limitations often found with O-Ball mini implants
- Simple, intuitive instrumentation and technique for minimally invasive flapless procedures
- A complete system with the best-in-class LOCATOR Attachment
- An increased practice revenue stream
THE LOCATOR® OVERDENTURE IMPLANT SYSTEM

A LESS INVASIVE, COST EFFECTIVE OPTION

A WELCOME ALTERNATIVE TO O-BALL MINI IMPLANTS

Dramatically reduced vertical height for patient comfort when the denture is removed - as well as increased denture strength

1. The LOCATOR Attachment's dramatically reduced vertical height provides patient comfort when the denture is removed, as well as increased denture strength as compared to O-Ball attachments.

2. Aggressive thread design that widens at the coronal portion providing primary stability when immediate loading may be indicated.

3. Proven RBM roughened surface on entire length of the implant.

4. Self-tapping design for ease of implant insertion and increased implant stability.

NTURE IMPLANT SYSTEM
FOR PATIENTS WITH NARROW RIDGES

A NARROW DIAMETER IMPLANT
FEATURING LOCATOR®, THE WORLD’S LEADING
OVERDENTURE ATTACHMENT

5
The LOCATOR Male self-aligns and pivots inside the denture cap providing a genuine resilient connection that holds-up to patient mastication forces while providing attachment durability.

6
LOCATOR Attachment is available in 2.5 and 4mm cuff heights for implant placement flexibility, Attachment interchangeability and replacement should wear occur throughout time. Individual replacement LOCATOR Attachments are also available in 2.5, 3.0, 4.0, 5.0 and 6mm cuff heights.

7
Available in 2.4 and 2.9mm diameters and 10, 12 or 14mm lengths for placement in all ridges.

ALL INCLUSIVE
PACKAGE CONTAINS
1 Implant
1 LOCATOR Attachment
1 LODI Male Processing Pack

Each Processing Pack has what you need to select retention levels and address draw correction; improving ease of denture placement and removal.

“"The LOCATOR Overdenture Implant is not a typical small diameter implant. It is a narrow body implant with a thread design like standard implants and it provides all of the attachment benefits I have come to appreciate from using LOCATOR. LODI is now my go to implant for patients with narrow bone width and limited finances. I am very pleased with the treatment outcomes and so are my patients.”

David A. Little, DDS
San Antonio, Texas USA
INTUITIVE AND SAFE INSTRUMENTATION WITH A SIMPLE PROCEDURE

All of the LOCATOR® Overdenture Implant System osteotomy preparation instruments include easily identifiable laser etched depth markings for clear visibility when drilling and placing implants. A drill stop set is also included for an additional level of depth control. These features provide you with simplicity and security during osteotomy preparation, especially when using a flapless technique.

1️⃣ REMOVAL
The Male Removal Tool has a sharp edge on the end to catch and remove the male from the Denture Cap.

2️⃣ INSERTION
The Male Seating Tool is used to seat the LOCATOR Male.

3️⃣ PLACEMENT
The LOCATOR Abutment Driver with the Abutment Holder Sleeve carries the attachment securely and places it onto the implant.

AN EASY DRILL SEQUENCE IN ALL BONE TYPES
Example Shown: Flapless Surgical/Technique for a 2.4mm x 12mm Implant

D1 BONE TYPE

- 1.2mm Pilot
- Full Depth 14mm Line
- Place at Low Speed
- Ratchet to Full Depth
- 2mm Soft Tissue

D2/D3/D4 BONE TYPE

- 1.2mm Pilot
- Full Depth 14mm Line
- Place at Low Speed
- Ratchet to Full Depth
A NARROW DIAMETER IMPLANT WITH BEST-IN-CLASS LOCATOR® TECHNOLOGY

Easy to insert and remove by your patients, the Zest LOCATOR Overdenture Attachment differentiating feature is the patented pivoting technology. Its innovative ability to pivot increases the attachment’s resiliency and tolerance for the high mastication forces an attachment must withstand. This streamlined performance leads to fewer problems, increased productivity and long-term patient satisfaction.

AWARD-WINNING, PATENTED PIVOTING TECHNOLOGY

The LOCATOR Male pivots in its permanent Denture Cap for a genuine resilient connection of the prosthesis without any resulting loss of retention. The male remains in static contact with the female socket, while the Denture Cap has a full range of rotational movement over the male. This pivoting action accommodates for the natural movements during occlusion, providing greater resiliency and preventing dislodgement.

Attachments that don’t pivot result in an overdenture that is locked in a static hold. As a patient is chewing, the attachment can easily disengage due to the opposing forces of occlusion. With LOCATOR, the pivoting technology provides patients with a normal, comfortable chewing function and unparalleled confidence in the secure fit of their overdenture.

VARIABLES FOR THE EXACT RETENTION NEEDS

The LOCATOR Males and Extended Range Males offer multiple retention levels, 0-5lbs., allowing you to select the ideal retention and accommodate for draw correction of divergent implants based on the number of implants placed and patient masticatory function. By contrast, the typical O-Ball one-piece mini implant has only one level of retention and doesn’t allow for draw correction of divergent implants. This limits your treatment abilities, possibly compromising denture fit and function.

LOCATOR MALES

Allows for 20 degrees of draw correction between implants.

EXTENDED RANGE MALES

Allows for 40 degrees of draw correction between implants.

- Self-aligning design for easy placement and removal
- Customizable levels of retention
- Draw correction of divergent implants up to 40°
- Lowest vertical profile
- Greater resiliency and exceptional durability
